1:Beaglehole and Beaglehole E-5 (1934-5)1938 Pukapukans

As a gift to Bernice P. Bishop Museum, the people of Pukapuka generously made a complete collection of objects of material culture, excepting only the few objects which they can no longer make. A day-to-day study of the processes of manufacture was of great value in clearing up many problems of technology.

Whatever success our work achieved, therefore, is due to the enthusiasm and cooperation of our informants, in the first place, and also of the people of Pukapuka as a whole. Our early work was done entirely with the aid of interpreters. Much of Ernest Beaglehole's later formal work was done with interpreters because he did not wish to risk losing material through inability to follow crucial explanations. Informants could speak much Rarotongan but required the use of Pukapukan when discussing language and various concepts of native Pukapukan life. Our interpreters could speak easily only the Rarotongan dialect. Thus a great deal of explanation between informant and interpreters was necessary before the final English version could be presented to us. For this reason and also because many subjects can not be discussed easily through the medium of a third person, Pearl Beaglehole accepted the necessity of doing without interpreters at the earliest possible moment.

CULTURE CONTACT

Pukapuka was discovered by Commodore Byron in 1765. Between that time and the landing of the first native missionaries of the London Missionary Society in 1857, the island was probably rarely visited by Europeans, presumably because of its isolation and the poverty of natural resources. Native tradition tells of three European ships which visited Pukapuka during these years. Between 1857 and the visit of the Reverend Wyatt Gill in 1862, most of the people of the island had been converted to Christianity. Peruvian slavers twice visited the atoll about 1863 and removed about 100 men and women, only one of whom, the late high chief, Pilato, returned to Pukapuka. In 1869, Captain English of the barque *R. W. Woods* (6, p. 33) landed in Honolulu 42 natives of Danger Island.[1] The natives were unsatisfactory both as plantation laborers and as domestic servants and some time later 20 of them were sent back to Pukapuka by the schooner *Annie*, Captain Babcock. A man from Atiu named Tiose, according to the Pukapukan account of this labor gang, returned with the Hawaiian party and later married a Pukapukan woman named Takele whom he had met in Hawaii.

The island was formally annexed to Great Britain in 1892 and included within the boundaries of New Zealand in 1901. The first resident agent visited the island in 1914, and since that year agents have been in residence most of the time. The majority of the people are members of the London Missionary Society church. A Seventh Day Adventist mission was started in 1919, a Roman Catholic mission about 1929. All three missions are served by native pastors.

1. [Pukapuka—analyst]

1:Beaglehole and Beaglehole E-5 (1934-5)1938 Pukapukans

served by native pastors. Communication with the outside world during the past years has varied considerably, depending on the rise and fall of the price of copra. For some time a Burns Philp trading schooner has visited the island twice each year to buy copra, to trade, and to carry mail, but this service is now discontinued with the closing of Apia as port of entry for Pukapuka. A warship of the New Zealand station usually makes an annual visit to Pukapuka. There is now occasional direct communication between Pukapuka and Rarotonga, headquarters for the Cook Islands Administration.

The effect of the contact with white culture upon native Pukapukan culture has been out of all proportion to the general lack of communication between the atoll and the outside world, due to the zeal of the native London Missionary Society pastors. Customs and practices associated with the old-time religion have been wiped out; religious structures have been destroyed, and the stones of which they were constructed used to build houses and the causeway that joins old and new Yato villages. Social organization has not been much affected beyond the breaking down of the power of the chiefs and their supersession as governing authorities by an authority set up under the Cook Islands Act. Old kinship avoidances show signs of falling into disuse among the younger generations, though they are strictly followed by the older people. Traditional history and genealogies are still well remembered.

The Pukapukan language is being gradually superseded by the Rarotongan as the language of church and government. The native missionaries have all been Pukapukan or Rarotongan, trained in the Rarotongan mission schools, and the Rarotongan dialect has been the language used by missionaries in the Cook Islands. The Bible used is in the Rarotongan dialect, and today Rarotongan is taught in the school by the present missionary and spoken exclusively by the resident agent. Very old people still speak fairly pure Pukapukan among themselves; some middle-aged people follow this example but use Rarotongan for church and state business; others tend to speak Rarotongan exclusively. Younger people who have passed through school tend to speak Rarotongan for all purposes and often find old Pukapukan speech or idiom difficult to understand. The old chants are remembered in Pukapukan, though they contain many archaic words which even those with a full and ready knowledge of Pukapukan can not understand. We insisted on informant's using the Pukapukan dialect as far as possible in their communications with us, as this was the only way to compile a vocabulary of the dialect; many were the arguments over the admission of various words to our lists of Pukapukan words.

The morality of the community has of course been vitally affected by missionary influence. As a result there is a wide breach between the moral theory on which the community is supposed to operate and the actual code of conduct followed by the majority. The life of the young people in its

made a right choice. Apparently no chief was ever deposed; hence the reigns of the chiefs of all the lineages must have been, in general, equally prosperous. In accounts of traditional history it is usual to find the chief displaying supernormal powers, bestowed by the god of his lineage.

In former times, as today, great rivalry was felt between the various lineages of the island, especially between those lineages headed by chiefs. Up to the time of the great seismic wave, no chief was superior to the rest. There was, rather, a shifting balance of power between the four chiefly lineages, temporary superiority going to that lineage which through the intrigue, personality, and strength of its chief, combined with numerical strength of its members, managed to gain predominance for the time. The chief of such a lineage would then claim to be the supreme chief of the island. His claim might be disputed, but as long as he was manifestly superior to the other chiefs nothing would be done about his pretensions. It was only after the seismic wave, with its catastrophic effects, that i Tua seems gradually to have assumed a dominance over the other three chiefly lineages. In the inter-lineage adoption that occurred after the seismic wave, a child from the strong lineage of Muliwutu was adopted into i Tua, to insure the continuation of this chiefly line; this seems to have lined up Muliwutu behind i Tua. With this support, i Tua became dominant and constituted itself the lineage of the supreme chief of the island, a status which it has retained to this day. As a lineage of the supreme chief was politically dominant, so were its gods preeminent over the other lineage gods. Mataliki and Taua, the major gods of i Tua, may then be considered the major gods of the island; they were most often called upon by the supreme chief to provide favors for the island as a whole. Nevertheless, the other chiefly lineages, particularly those of Ngake, have never completely acquiesced in either the political or religious dominance of i Tua.

Political Control

The functions of the three governing groups on the island may be summarized as follows:

Village meetings (*wakapono hulu*), attended by the chiefs, sub-chiefs, and all adult males of the village, discussed matters affecting the village and the reserves, and settled intra-village disputes. Meetings of the old men's group (*wakapononga no te tupele*) discussed island affairs. Meetings of the chiefs (*wakapononga a te urui aliki*) discussed island and inter-lineage matters. The division of functions between these governing bodies is not clearly remembered today when the government of the island has been so completely transformed by the resident agent and his nominated Island Council. Informants believed that the supreme chief called the minor chiefs together at unspecified times to discuss matters referred to him by the council of old men (*tupele*). All decisions of the old men were presented to the high chief or the council of chiefs for final approval. Whether or not this approval was nominal depended on the prestige and power of the high chief. Notwithstanding, the final veto seems to have rested with

of copra are exported. Nine varieties of taro (*Colocasia esculenta*) grow on the island; *talo Borabora, talo maoraora, talo koli, talo takene, talo nenengu, talo kula, talo pongi, talo taraki, talo 'enga'enga. Puraka* (*Cyrtosperma chamissonis*), a coarse tuber of the taro family with enormous heart-shaped leaves, is grown in the wet pits. This plant is said to have been introduced from the Cook Islands. Bananas (*wuti*), papayas, limes, and sugar cane grow on the island, but because of the poor soil the production is slight and contributes very little to the food supply. Hutchin (6, p. 173) states that sweet potatoes (*kumala*) and arrowroot were formerly grown.

Fish forms the chief flesh diet. Turtles are caught during the mating season when they are off the reefs and the females come ashore to lay their eggs in the sand. Pigs and chickens are kept on the island but are eaten only on occasions of celebrating some event.

Although Pukapuka was sighted by a European ship as early as 1765, it has enjoyed an existence remarkably free from intercourse with Europeans because of its isolation and its lack of natural resources. Captain Byron discovered the island on June 21, 1765, and named it "Danger Island" because of its treacherous submerged reefs and rapid currents. Lovett (8, p. 372) states that a native missionary teacher was on the island in 1857 and had proselytized most of the natives before the arrival of Reverend W. W. Gill, the first European missionary, in 1862. During the decade 1860-70 Peruvian slavers raided the island for laborers to carry to South America. In two visits they took 150 men and women, none of whom ever returned to their home (11).

The island was formally annexed by Great Britain in 1892. In 1901, by an Imperial Order in Council, Great Britain extended the boundaries of New Zealand to include the Cook Islands, Tongareva, Manihiki, Rakahanga, Palmerston, Pukapuka, and Niue. Pukapuka is now governed by the Cook Islands Administration. At present Mr. Geoffrey Henry, Resident Agent, directs the government, and with Mrs. Henry conducts the island school and cares for the health and sanitation. Most of the population belongs to the London Missionary Society Protestant church, which is under the direction of a native pastor. In 1919 Mr. Wicks, of the Seventh Day Adventist sect, arrived at the island and directed the building of a church during his temporary residence. A small group still retain their membership in this church. No European missionaries live on the island today.
